PRODUCTS & SERVICES

*What we build, install, and keep running — and
the reason each one earns a place on the truck.*

POWER PROTECTION, SOLVED END TO END

Zigma Technologies has spent **17+ years** in industrial and power electronics — supplying, installing, and maintaining the UPS, solar, and distribution systems that industry, IT infrastructure, and homes depend on. One vendor, from design through to the AMC that keeps it running.

17+ YEARS IN POWER ELECTRONICS
10,000+ SYSTEMS INSTALLED
6,000+ CUSTOMERS SERVED
500 CITIES, PAN-INDIA AMC REACH

IN THIS GUIDE

Products**UPS · Studer Hybrid · Solar · Inverters · Batteries · Stabilizers · BMS**

Services**Field Services · UPS AMC · Repair · Rental · Solar Maintenance · Design Support**

Partner**Authorised Kirloskar Solar distributor**

PRODUCTS

Seven categories, chosen for what a site actually needs to stay powered.

—PRODUCT 01 — POWER PROTECTION

UPS

1kVA to 500kVA, online & offline

WHAT IT IS

Multi-brand UPS systems sized from a single office rack to a full data hall, covering both online and offline topologies for entry-level through enterprise loads.

WHY IT MATTERS

A five-second power gap can cost a server, a production line, or a day's data. Right-sized UPS protection keeps critical load running through the outage, not after it.

ABB	APC / SCHNEIDER	VERTIV	NUMERIC	EATON	DELTA	POWERONE
-----	-----------------	--------	---------	-------	-------	----------

STUDER HYBRID INVERTERS

Swiss engineering — XTM · XTH · XTS series

WHAT IT IS

Hybrid inverter/chargers that blend solar, battery, and grid power automatically, with remote monitoring and support for lead-acid or lithium battery banks.

WHY IT MATTERS

When the grid drops, switching sources shouldn't be your problem to solve manually — and a scalable, parallel-capable design means the system grows with the site instead of being replaced.

OFF-GRID	HYBRID	GRID-TIED	SCALABLE
----------	--------	-----------	----------

SOLAR SOLUTIONS

Kirloskar Solar authorised distributor

WHAT IT IS

Rooftop solar — panels, on-grid and off-grid string inverters, and combo systems — installed and distributed in partnership with Kirloskar Brothers Limited.

WHY IT MATTERS

A typical rooftop system pays for itself in three to four years through savings, net metering credit, and available tax benefits. After that, the power is close to free.

3-4YR PAYBACK	NET METERING	TAX BENEFITS
---------------	--------------	--------------

INVERTERS

Home & office, pure or modified sine wave

WHAT IT IS

DC-to-AC backup inverters from Microtek, Luminous, and Eastman, available in pure sine wave and modified sine wave formats.

WHY IT MATTERS

Not every load needs an industrial UPS. A well-matched inverter keeps lights, fans, and everyday electronics running through shorter local outages, at a fraction of the cost.

MICROTEK	LUMINOUS	EASTMAN
----------	----------	---------

BATTERIES

Deep-cycle, maintenance-free

WHAT IT IS

Deep-cycle inverter and UPS batteries from Amaron Quanta, Exide, and Eastman — sealed and leak-proof for safe indoor use.

WHY IT MATTERS

A backup system is only as good as its battery bank. Deep-cycle capacity and long service life turn a UPS or inverter from a one-time save into years of dependable backup.

AMARON QUANTA	EXIDE	EASTMAN
---------------	-------	---------

STABILIZERS

Static regulators & isolation transformers

WHAT IT IS

PWM-based static voltage regulators holding output within $\pm 1\%$, correcting within roughly one AC cycle, plus isolation transformers that strip out EMI/RFI noise for sensitive loads.

WHY IT MATTERS

Voltage swings damage electronics quietly, shortening their life long before they fail outright. Precision regulation and clean isolation protect IT, telecom, and medical-grade equipment from that slow wear.

±1% REGULATION	20MS CORRECTION	EMI / RFI FILTERING
----------------	-----------------	---------------------

BMS

Smart-charging & remote monitoring

WHAT IT IS

Battery management components — current sensors, expansion modules, and monitoring harnesses — for smart-charging and remote oversight of stationary UPS battery banks.

WHY IT MATTERS

You can't manage what you can't see. Real-time battery monitoring catches degradation early, before it becomes a failed backup at the worst possible moment.

CURRENT SENSING	REMOTE MONITORING	CELL HEALTH
-----------------	-------------------	-------------

SERVICES

What happens after the invoice – because a system is only as good as its upkeep.

—SERVICE 01 – INSTALLATION

FIELD SERVICES

Site to switch-on, for UPS & solar

WHAT IT IS

End-to-end field support – site assessment, equipment selection, system design, electrical connection, and testing – for both UPS and solar installations.

WHY IT MATTERS

Correct installation is what everything else depends on. Getting it right the first time is cheaper than fixing it after a fault.

SITE ASSESSMENT	SYSTEM DESIGN	TESTING & VALIDATION
-----------------	---------------	----------------------

UPS AMC

Annual maintenance, 1kVA–500kVA

WHAT IT IS

Annual maintenance contracts for all major UPS brands — preventive maintenance, battery testing and replacement, load testing, emergency response, and a technical helpdesk. Over 10,000 AMC commitments delivered across roughly 500 Indian cities.

WHY IT MATTERS

A warranty ends; the need for reliable power doesn't. AMC coverage catches wear before it becomes downtime, and puts an advisor on call instead of leaving you to guess.

PREVENTIVE MAINTENANCE	BATTERY TESTING	SLA-BACKED
------------------------	-----------------	------------

UPS REPAIR

Onsite & workshop, all brands

WHAT IT IS

Corrective maintenance and repair for all UPS brands, handled onsite or at Zigma's workshop.

WHY IT MATTERS

Every hour a failed UPS stays down is an hour of exposure. Fast, expert repair gets protection back in place before the next outage finds you unguarded.

ONSITE REPAIR	WORKSHOP REPAIR
---------------	-----------------

UPS RENTAL

Hours to months, flexible terms

WHAT IT IS

Short-term UPS rental for events, exams, and temporary sites, available for periods from hours to months.

WHY IT MATTERS

For a one-off event or a short project, renting protection costs less than owning it – and comes without the upkeep.

SHORT-TERM	NO MAINTENANCE BURDEN
------------	-----------------------

SOLAR MAINTENANCE

Inspection, cleaning, optimisation

WHAT IT IS

Inspection, cleaning, preventive maintenance, and upgrade or replacement support for installed solar systems.

WHY IT MATTERS

Dust, weather, and time quietly erode panel output. Regular servicing keeps a solar investment performing at the payback numbers it was sold on.

PERFORMANCE CHECKS	PANEL CLEANING
--------------------	----------------

DESIGN & OUTSOURCE SUPPORT

Eplan & AutoCAD, across industries

WHAT IT IS

Electrical and panel design support across machinery, panel building, automotive, process industry, energy, and building technology projects.

WHY IT MATTERS

Specialised design capacity is expensive to keep in-house and idle between projects. Outsourced expertise gives you it exactly when a project needs it, not year-round.

EPLAN	AUTOCAD	PANEL BUILDING
-------	---------	----------------

— IN SHORT —

ONE VENDOR, THE WHOLE POWER CHAIN

Seven product lines and six services, built to work as one system: source, protect, store, and maintain — with a single ISO-certified team accountable for all of it, from Bangalore to sites across India.
